

## Organize and Index Language Model Knowledge

Make language models organize and index their knowledge and spit it out given an index entry. How cool it would be to ask a language model to write its 10th fairy tale? Not that much :D, but it would be really useful for data generation and data cleaning (which is basically the biggest challenge of the open-source community to catch up with companies training language models). Imagine that you want ChatGPT to tell you 100 fairy tales. Right now it's impossible since it will forget what it had said and start repeating stories. But it is not that difficult to fix it. Approach me to know how and start working on it.
